Volume 12, Number 1  
February 2005  
ECLIPSE® Physician's Software  
© 2005 MPN Software Systems

This interim update extends current capabilities, adds new functionality, and paves the way for future changes. Additional fields are now available to add patient contact detail. A new pop-up window on the patient's **Personal** tab allows you to add cell phone, beeper, and alternate email information.

Home phone (201)-460-9957  
Work / Alternate phone & ext (212)-555-7914  
Fax (212)-555-7999  
Cell phone (201)-788-9761  
Beeper ( ) - -  
Beeper PIN  
E-mail allison977@aol.com  
Work / Alternate E-mail  
Emergency contact  
OK Cancel  
Start date Jul 26 2002

This information is displayed in a new scrolling window similar to those which display guarantor data.

However, all of these windows have been modified to a WYSIWYG format so they're easier to read at a glance!

Though the Daily Reminders/Notes system remains available & unchanged, we have created a sophisticated new **Alerts** system that is a true evolution of the reminders into an automatic database that can target specific users, patients, etc. with different priority alert messages.

Alert	Alert Type	Effective	Terminate On	Deactivate?
This is a high priority patient & user specific alert	Billing	11/23/2004	12/23/2004	<input type="checkbox"/>
This is a low priority alert		11/29/2004	12/29/2004	<input type="checkbox"/>
This is a medium priority patient alert seen by all users	Appointments	11/30/2004	12/30/2004	<input type="checkbox"/>

Alerts are available as both system wide and patient specific text messages.

Patient alerts appear when you retrieve a patient's folder or schedule an appointment. Since alerts can optionally be targeted to any user, alerts that appear

when the billing manager retrieves a folder may differ from those directed at front desk personnel. The new **Alerts** tab automatically appears when alerts are available for this patient.

System alerts are displayed after you log in and include your alerts as well as those for everyone. A new tool button provides instant access to this window where you can select your view.

Alert	Alert Type	Effective
for you		12/02/2004
item alert for today		11/29/2004

Press **F1** from anywhere in ECLIPSE for HELP, press the **Index** button, and select the **Alerts** topic for a complete explanation of the Alerts system.

See the other side for installation instructions...

Before you can use the Alerts system, the System Administrator must setup permissions from the File | File Maintenance | Database Tables | Users submenu.

## What's NEW in v9...

New Alerts database allows automated text message alerts to be created and optionally assigned to specific patients and/or users

Scheduler now displays checkmarks next to completed appointments

Cut & paste appointments within the scheduler

New fields to store patient cell phone, beeper & alternate e-mail information

ECLIPSE now remembers your last office/provider selection when the scheduler is launched

Added 1/2004 revision of NYS NF-3 form & 12/2004 revision of NYS C-4 form

ECLIPSE now remembers your last patient rolodex setting

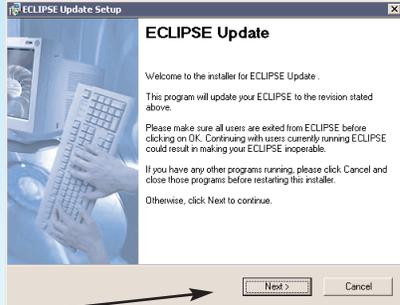

New data filter for inactive patients

Various ANSI 837 & CMS 1500 form changes

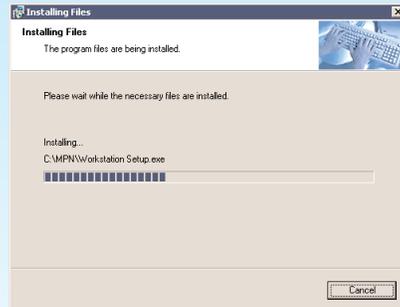

Font changes on (for example) patient Guarantor tab make it easier to determine information with just a glance

# Installation Instructions

1. Place the CD in the appropriate drive on the computer where your database is installed / sentinel is attached *after reviewing the directions on the CD*. Follow these directions in the event your computer's "auto-run" feature doesn't start the process automatically. Then, press **Install ECLIPSE Update** to begin the installation.

2. Read the instructions & press **Next** to continue.

3. Installation should be quick.

4. The update has been installed successfully. Press **Finish** to exit.

## Gigabit Ethernet

If you're among the majority of ECLIPSE clients who use a network... how would you react if we told you it was possible to increase the speed of your network *by a factor of 10* at a reasonable cost... *without replacing your computers*? Odds are high that your office uses 10/100 Mbps Ethernet, which requires a Network Interface Card (NIC) card in your computer and one or more small "switches" or "hubs" to distribute data among the computers in your office. NIC's and switches for the average office (8 or fewer computers) currently cost about \$100 each. The new Gigabit standard costs just a little more. Your hardware company can probably upgrade your entire system for peanuts compared to the price of a new system!

## Document Management

**If you're not already using our built-in document management features, you're missing out on a tremendous opportunity to reduce your workload by attaching documents directly to patient files.** Scan or import EOB's, lab and x-ray reports, authorizations, attorney liens, life insurance questionnaires, etc. ECLIPSE can easily track millions of documents. Since documents can rapidly use up precious hard disk space on your server, ECLIPSE allows you to optionally dedicate a separate network storage area (e.g. another computer or dedicated data server) to maintain your document database.

## Coming Soon...

Have you ever placed a colored sticky note (Post-it) or used a highlighter on a patient bill or statement to really get that patient's attention? Imagine if you could do all that directly from your computer before you print it (in color if you have a color printer). Do you write notes on any of your reports after you print them? Suppose you could make those notes on your reports without printing them to paper and simply save the report (and notes) for later review (or printing)? That's just a glimpse of what's coming in 2005.
