If a picture's worth a thousand words, consider the form below. Until recently, this office (an ECLIPSE client for the past 20 years), was forced to fill out their Horizon BC/BS treatment request forms by hand over and over and over again. They now print

all this tedious recurring information automatically! Providers & staff members love it for the same reason. It frees them from one of the most repetitive aspects of patient care. And since payers routinely post all these forms in electronic format on their websites, it's relatively straightforward to obtain them. Of course, we may

have already incorporated the forms that interest you. But that's just the beginning. Automating standard information (e.g. names, policy #'s, provider PIN's) helps eliminate mistakes that often delay reimbursement.

**ECLIPSE now does WYSIWYG (What You See Is What You Get) form letters that you can create in minutes.** The new interface is incredibly easy to use. Select Form Letters from the View | Design Tools menu to launch the form letter designer. You have complete control over fonts, colors, justification, bullets, and other items from the toolbar. Margins are handled automatically. You can also insert images (such as your letterhead). In order to add patient related information into the form letter, simply make your choices & press the Add button. We don't want to turn you into a programmer, so you can select data from simple drop-lists. For instance, when you select a name such as **PatientAssignedAttorney**, it's exactly as it appears, a custom variable that will always correspond to the assigned attorney for the current patient case. Of course, some data simply isn't part of the ECLIPSE database. Suppose you need to add today's date to your letter? Use the included **System** table to retrieve data related to date, time, etc.

## What's NEW in v9...

### Electronic Health Records.

Create custom data entry forms to add & save custom patient data (e.g. a physical exam).

**Document Automation!** Import forms that you routinely fill out & add patient information anywhere you want on the form to help ease & automate your paperwork load.

**New Template Designer** allows you to create multi page custom data entry templates to store information.

Create **custom fee slips** which include graphics using the new template designer.

Create custom form letters.

Securely read & annotate your reports as PDF documents. Add sticky notes, highlights, etc.

New system configuration option for HIPAA ensures statements are sent directly to patients once they reach their majority.

Improved email routines to work with Microsoft Outlook.

Add separate comments to bills that appear on the patient ledger with services & credits.

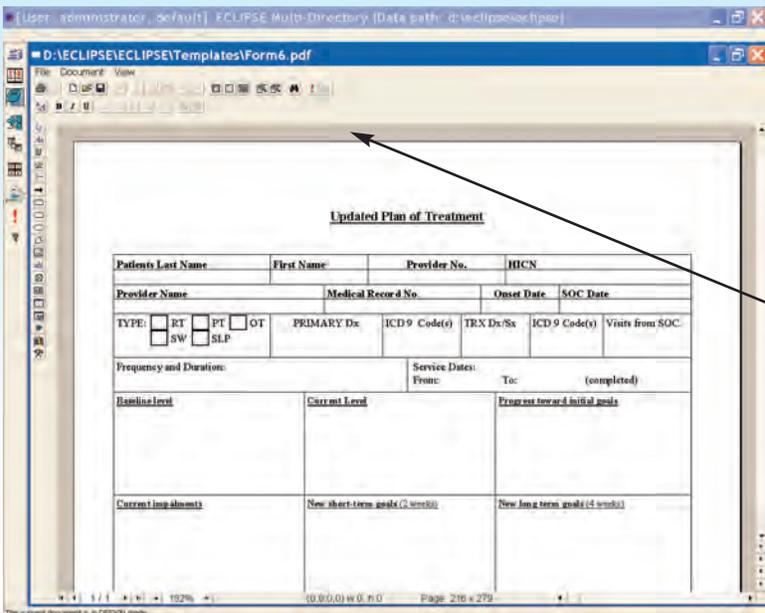

# Electronic Health Records

Patient documentation can take many forms. Think of all the items that make their way into your patient charts... from handwritten notes and encounter forms to lab results and insurance cards.

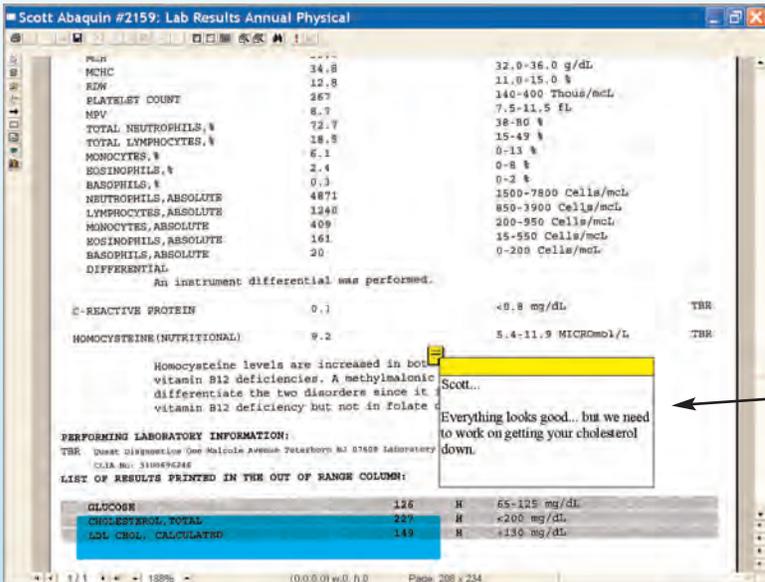

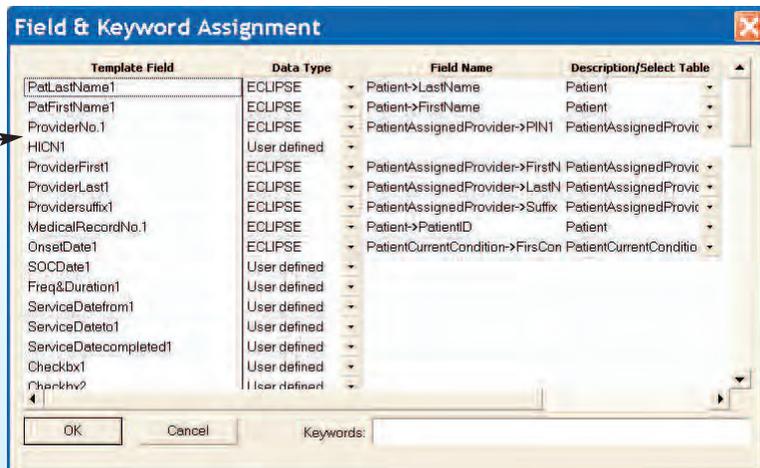

Our EHR allows you to keep it all in one place. Enter data into your own custom templates & store third party documentation. Custom icons provide fast visual identification of stored information as you scroll.

Use the Template Designer to create or modify custom multi-page data entry templates to store information. The WYSIWYG environment provides a full palette of custom controls from arrows to rectangles to sticky notes to data entry fields. Import images or documents created elsewhere. You control colors, fonts, and alignment. *Advanced version only:* Design templates that can display as checkboxes or selection lists for faster, more accurate data entry

User defined data entry objects (e.g. text fields, check boxes and lists) in your templates can be given names and descriptions. Patient data can be assigned to display in fields by simply selecting the data from dropdown lists.

Documents imported as or converted to PDF format can be annotated with arrows, sticky notes and highlights. You can also use the highlighter to black out sections such as personal history information to keep them private. *Advanced version only:* Hide annotations prior to printing or emailing a document by pressing a single button on the tool bar.

This interim update is available right now on our website and will be available later this year on CD as a featured release. As always, if your maintenance contract is current, you will receive the update when it becomes available or you can download it today. Please note that you must have internet service to acquire an interim release.
